Introduction:

This Wangle and Analyze Data Project is part of the Udacity Data Analyst Nanodegree program, the data set is from the twitter account WeRateDogs, as know as: @dog_rates, which provides information about dogs.

WeRateDogs asks people to post photos of their dogs, and asks the followers to rate the dogs, ranging from 1- 10.

As the figure below shows, over the time range, despite some outliers, the ratings below 1.25 are majority. However, as time going by, these ratings are decreasing, and the overall ratings are leveled up around 1 – 1.25.
